Introduction

The ACHA-National Faculty & Staff Health Assessment (ACHA-NFSHA) is a survey effort organized by the American College Health Association (ACHA) to assist college health service providers, health educators, counselors, and administrators in collecting data about their faculty and staff habits, behaviors, and perceptions on the most prevalent health topics.

Please note the ACHA-NFSHA is not appropriate for trend comparison with items from the pilot ACHA-NFSHA survey. Directly comparing pre- and post-redesign estimates on similar data points, without taking into account the impact of the survey's redesign, can lead to an erroneous conclusion.

Notes about this report:

1. Missing values have been excluded from analysis and only valid percents are included in this document.
2. Faculty and Staff responding "not applicable" were excluded from several analyses, which are specifically noted throughout this document. This will often explain differences observed between this document and the full data report.
3. A note about the use of sex and gender in this report: Survey responses are reported by sex based on the responses to questions 46, 47, and 48. For the purpose of the ACHA-NFSHA report documents, respondents are reported as male or female only when their responses to these three questions are consistent with one another. If gender identity is consistent with sex at birth AND "no" is selected for transgender, then respondents are designated as either male or female. If respondents select "yes" for transgender OR their sex at birth is not consistent with their gender identity, then they are designated as non-binary. A respondent that selects "intersex" for sex at birth, "no" for transgender, and man or woman for gender identity are designated as male or female. A respondent that selects "intersex" for sex at birth, "yes" for transgender, or selects a gender identity other than man or woman are designated as non-binary. A respondent that skips any of the three questions is designated as unknown. Totals displayed in this report include non-binary and unknown responses.

For additional information about the survey's development, design, and methodology, email Christine Kukich, MS (Ckukich@acha.org.).

This Executive Summary highlights results of the ACHA-NFSHA Fall 2021 survey for Reference Group consisting of 2359 respondents.

The overall response proportion was 24.1%.
