Reference Group Executive Summary

*Due to the COVID-19 pandemic, schools that began data collection after March 16, 2020 were not included in the reference group.

ACHA, the nation's principal advocate and leadership organization for college and university health, represents a diverse membership that provides and supports the delivery of health care and prevention and wellness services for the nation's 20 million college students. For more information about the association's programs and services, visit www.acha.org, and www.acha.org/NCHA.

**Suggested citation for this document:**

The ACHA-National College Health Assessment (ACHA-NCHA) is a national research survey organized by the American College Health Association (ACHA) to assist college health service providers, health educators, counselors, and administrators in collecting data about their students' habits and behaviors on the most prevalent health topics. The ACHA-NCHA now provides the largest known comprehensive data set on the health of college students, providing the college health and higher education fields with a vast spectrum of information on student health.

ACHA initiated the original ACHA-NCHA in 2000 and the instrument was used nationwide through the Spring 2008 data collection period. A revised survey, the ACHA-NCHA-II, was in use from Fall 2008 - Spring 2019 data collection periods. The survey was redesigned again, and data collection with the ACHA-NCHA III began in Fall 2019.

Please note that it is not appropriate to compare trends between versions of the survey. Directly comparing data points between the Original ACHA-NCHA, the ACHA-NCHA II, and the ACHA-NCHA III can lead to an erroneous conclusions and is not recommended.

**Notes about this report:**

1. Missing values have been excluded from analysis and only valid percents are included in this document, unless otherwise noted.

2. **The ACHA-NCHA III is programmed differently than earlier versions of the survey.** Rather than asking the respondents to answer every question (and offering a "not applicable" option), display logic was used throughout the survey to determine whether, based on their response to an earlier question, the student saw a follow-up question. This makes the valid percents of certain questions impossible to apply to the entire sample, as the denominator used was limited to only the number of students that saw the question. When appropriate, results are also presented using the entire sample as the denominator to show the proportion of the overall sample that experienced a particular issue. These differences in presentation are carefully noted throughout the document and will often explain differences observed between this document and the full data report. Please look carefully at descriptions of the data presented in each table, as well as any footnotes included.

3. **About the use of sex and gender in this report:** Survey responses are reported by sex based on the responses to questions 67A, 67B, and 67C. For the purpose of the ACHA-NCHA report documents, respondents are reported as male or female only when their responses to these three questions are consistent with one another. If gender identity is consistent with sex at birth AND "no" is selected for transgender, then respondents are designated as either **male or female**. If respondents select "yes" for transgender OR their sex at birth is not consistent with their gender identity, then they are designated as **non-binary**. A respondent that selects "intersex" for sex at birth, "no" for transgender, and man or woman for gender identity are designated as **male or female**. A respondent that selects "intersex" for sex at birth, "yes" for transgender, or selects a gender identity other than man or woman are designated as **non-binary**. A respondent that skips any of the three questions is designated as **unknown**. Totals displayed in this report include non-binary and unknown responses.

For additional information about the survey’s development, design, and methodology, email Mary T Hoban, PhD, MCHES, (mhoban@acha.org), Christine Kukich, MS (ckukich@acha.org), or visit www.acha-ncha.org.

This Executive Summary highlights results of the ACHA-NCHA III Spring 2020 survey for Reference Group consisting of 50,307 respondents.

The response rate was 14.1%.
Findings

A. General Health and Campus Climate

- 55.8% of college students surveyed (64.1% male and 53.0% female) described their health as *very good or excellent*.
- 90.2% of college students surveyed (92.3% male and 89.8% female) described their health as *good, very good or excellent*.

Proportion of college students who reported they *agree* or *strongly agree* that:

Students meeting the recommended guidelines for physical activity
Washington, DC: US Dept of Health and Human Services; 2018

Definitions:
■ Recommendation for **aerobic activity**: 150 minutes or more of moderate-intensity physical activity per week or 75 minutes of vigorous-intensity physical activity or the equivalent combination
■ Recommendation for **strength training**: 2 or more days a week of moderate or greater intensity activities that involve all major muscle groups
■ **Active Adults** meet the recommendation for strength training AND aerobic activity
■ **Highly Active Adults** meet the recommendation for strength training and **TWICE** the recommendation for aerobic activity (300 minutes or more of moderate-intensity physical activity per week or 150 minutes of vigorous-intensity physical activity or the equivalent combination)

</tbody>
</table>

### D. Impediments to Academic Performance

Respondents are asked in numerous places throughout the survey about issues that might have negatively impacted their academic performance within the last 12 months. This is defined as negatively impacting their performance in a class or delaying progress towards their degree. Both types of negative impacts are represented in the figures below. Please refer to the corresponding Data Report for specific figures on each type of impact. Figures in the left columns use all students in the sample as the denominator. Figures in the right columns use only the students that experienced that issue (e.g. students who used cannabis, reported a problem or challenge with finances, or experienced a particular health issue) in the denominator. *(items are listed in the order in which they appear in the survey)*

<table>

Students in Recovery
- 1.8 % of college students surveyed (2.3 % male and 1.4 % female) indicated they were in recovery from alcohol or other drug use.

When, if ever, was the last time you:

*These figures use all students in the sample as the denominator, rather than just those students who reported tobacco or nicotine delivery product use in the last 3 months.

Driving under the influence
- 15.6 % of college students reported driving after having any alcohol in the last 30 days.*
  *Only students who reported driving in the last 30 days and drinking alcohol in the last 30 days were asked this question.
- 38.4 % of college students reported driving within 6 hours of using cannabis/marijuana in the last 30 days.*
  *Only students who reported driving in the last 30 days and using cannabis in the last 30 days were asked this question.

Estimated Blood Alcohol Concentration (or eBAC) of college students. Due to the improbability of a student surviving a drinking episode resulting in an extremely high eBAC, all students with an eBAC of 0.50 or higher are also omitted from these eBAC figures. eBAC is an estimated figure based on the reported number of drinks consumed during the last time they drank alcohol in a social setting, their approximate time of consumption, sex, weight, and the average rate of ethanol metabolism. Only students who reported drinking alcohol within the last 3 months answered these questions.

<table>

Suicide attempt

2 % of college students surveyed (2.3 % male and 1.7 % female) indicated they had attempted suicide within the last 12 months.

Within the last 12 months, how would you rate the overall level of stress experienced:

<table>
<thead>
<tr>
<th></th>
<th>Percent (%)</th>
<th>Male</th>
<th>Female</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>

### J. Ongoing or Chronic Conditions

The questions for the *ongoing or chronic conditions* are presented differently in this report than the order they appear in the survey. In the survey, all items appear in a single list, ordered alphabetically. In this report, the conditions are presented in groups to ease burden on the reader. The findings are divided into mental health conditions, STIs and other chronic infections, and other ongoing or chronic conditions in this report.

Participated in organized college athletics:
- Varsity: 4.1%
- Club sports: 8.5%
- Intramurals: 13.1%

Member of a social fraternity or sorority:
- Greek member: 10.3%
Demographics of Participating Institutions

One hundred six postsecondary institutions self-selected to participate in the Spring 2020 ACHA National College Health Assessment and 69,004 surveys were completed by students on these campuses. For the purpose of forming the Reference Group, only institutions located in the United States that surveyed all students or used a random sampling technique, and used the ACHA-NCHA III (currently only offered as a web survey) are included in the analysis, yielding a final data set consisting of 50,307 students at 75 schools. Demographic characteristics of the 75 campuses follow.
