Forty-five postsecondary institutions self-selected to participate in the Fall 2008 ACHA National College Health Assessment and 28,380 surveys were completed by students on these campuses. For the purpose of forming the Reference Group, only those institutions that surveyed all students, or used a random sampling technique are included in the analysis, yielding a final data set consisting of 26,685 students and 40 schools. Demographic characteristics of the 40 campuses follow:
