CISGENDER/HETEROSEXUAL & LGBTQ+ COMPARISON

December 5, 2022

FREQUENCY REPORT

Number of Surveys (n) = 69131 Web Surveys

Frequency tables are presented for every multiple choice and select all that apply questions from the survey. The mean, median, standard deviation, minimum, and maximum values are provided for the variables that are continuous, as well as those scales within the survey that produce a score.

Space for value labels associated with each response option is limited in this document and are often abbreviated for brevity. Furthermore, response options are listed in numeric order within the frequency tables, which may differ from the way they appear to students in the survey. **Please always refer to the survey codebook rather than this report document for the exact wording of survey questions and the associated response options.**

In this report students that are categorized as cis man or cis woman in the RSEX variable AND selected straight/heterosexual in question N3Q68, are considered cisgender/heterosexual, shortened to "cis/het" in this report. Students that are categorized as transgender/gender non-conforming in the RSEX variable OR those who selected any option other than straight/heterosexual in question N3Q68 are considered "LGBTQ+" in this report.

Due to the improbability of a student surviving a drinking episode resulting in an extremely high BAC, all students with a BAC of .50% or higher are omitted from the BAC figures in this report. BAC is an estimated figure based on the reported number of drinks consumed during the last time they drank alcohol in a social setting, their approximate time of consumption, sex, weight, and the average rate of ethanol metabolism. The BAC variable has only been altered for this report, and remains unchanged in the data file.
