

# UNDERGRADUATE STUDENT Reference Group

## Data Report Spring 2016

---

The ACHA-NCHA II supports the health of the campus community by fulfilling the academic mission, supporting short- and long-term healthy behaviors, and gaining a current profile of health trends within the campus community.

### Demographics of Participating Institutions

One hundred seventy five US postsecondary institutions self-selected to participate in the Spring 2016 ACHA National College Health Assessment and 116,468 surveys were completed by students on these campuses. For the purpose of forming the Reference Group, only institutions located in the United States that surveyed all students or used a random sampling technique are included in the analysis, yielding a final data set consisting of 95,761 students at 137 schools. **This report includes only data from 80,139 UNDERGRADUATE students at 137 schools.** Demographic characteristics of the 137 campuses follow. *Note that schools surveying in the 30 days following their Spring Break are omitted from this report.*

**A note about the use of sex and gender in this report:**

Survey responses are reported by sex based on the responses to questions 47a, 47b, and 47c. For the purpose of the ACHA-NCHA report documents, respondents are reported as male or female only when their responses to these three questions are consistent with one another. If students' gender identity is consistent with their sex at birth AND the student selects "no" for transgender, then respondents are designated as either *male* or *female*. If a respondent selects "yes" for transgender OR their sex at birth is not consistent with their gender identity, then they are designated as *non-binary*. A respondent that skips any of the three questions is designated as *unknown*. Only 3 of the 4 categories are displayed in this report. Students categorized as *non-binary* are included in the *Total* column, but are not presented in a separate column. When the *Total* of any given row is higher than the sum of the *male*, *female*, and *unknown* students, the difference can be attributed to *non-binary* students that selected the response option presented in that row.
